### **2014 National Air Toxics Assessment Release and Sterigenics Findings**

Key Message: Region 5 amplified the national announcement of the release of the National Air Toxics Assessment for 2014 and conducted limited outreach on the elevated ethylene oxide findings at the Sterigenics facility in Willowbrook, IL.

In addition to participating on the national congressional briefing, Region 5 contacted state agencies and local elected officials of the four areas within Region 5 that show an elevated cancer risk from the chemical ethylene oxide. In addition, on August 22, Region 5 held a congressional briefing for the Illinois delegation specifically regarding the Sterigenics facility.
